🔄 Samenergy

Profile

Passionate and solution-driven Software Engineer with experience in backend development, cloud deployment, and machine learning applications. Currently pursuing a Bachelor's in Software Engineering with a specialization in Machine Learning. Proven ability to integrate AI into real-world platforms, build scalable APIs, and automate cloud-based solutions. Seeking to apply technical and leadership skills to create impactful, intelligent systems.

Skills

Technical Skills

- **Languages & Frameworks:** Python, Django, Node.js, Express, JavaScript, HTML, CSS, React.js
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Tools & Technologies:** RESTful APIs, Git, Docker, Tailwind CSS, Typebot, WhatsApp Business API

Technical Skills

- **Machine Learning:** Data Preprocessing, Classical ML, Neural Networks, TensorFlow, Keras
- **Other Skills:** Software Testing, Debugging, Documentation, NLP, Model Deployment, Stress Testing with Locust

Professional Experience

02/2024 – 12/2024
Kigali, Rwanda

Backend Developer

Green Art Tech

- Develop and maintain scalable APIs and web applications using Python, Django, Node.js, and Express, ensuring security and performance.
- Design and optimize PostgreSQL/MySQL databases, integrate ML models, and implement authentication/authorization (JWT, OAuth).
- Integrate third-party services (payment gateways, external APIs) and optimize API performance with best security practices.

08/2022 – 01/2023
Kigali, Rwanda

Quality Assurance

Consultified Rwanda

- Conducted end-to-end testing to identify and report issues across multiple websites.
- Collaborated with developers to implement improvements and maintain documentation.
- Executed test cases ensuring cross-platform compatibility and optimal performance.

Education

01/2023 – 12/2025
Kigali, Rwanda

Bachelor's Degree in Software Engineering

African Leadership University

- Specializing in Machine Learning, focusing on integrating ML models into applications.
- Gained experience in full-stack web development through hands-on projects.

01/2018 – 07/2021
Kigali, Rwanda

Secondary School Diploma in Mathematics, Economics, and Computer Science

IFAK Don Bosco

Completed secondary education with a focus on Mathematics, Economics, and Computer Science. This foundation provided me with strong analytical skills and a passion for technology, which greatly influenced my decision to pursue a degree in Software Engineering.

Projects

LeafSense [↗](#)

AI-powered platform for detecting plant diseases from leaf images using CNNs.

- Compared ML algorithms and neural networks for accuracy and efficiency.
- Built end-to-end ML pipeline and deployed a working web app.

HealthSync Rwanda [↗](#)

Digital record system for clinics to automate patient tracking and insurance claims.

- Enabled secure patient data sharing between doctors.
- Increased patient care speed and transparency across health centers.

FarmLink [↗](#)

An agri-tech mobile app to connect farmers with buyers and suppliers.

- Backend includes Google OAuth, JWT, and secure user registration and login.
- Completed full-stack implementation including frontend integration and deployment.

SmartBin [↗](#)

Smart Bin aims to revolutionize waste collection and recycling processes. Utilizing IoT sensors, the system provides real-time data on waste levels, optimizing collection routes and schedules. This approach not only reduces operational costs but also improves waste management efficiency and promotes environmental sustainability by ensuring timely recycling and waste reduction.
